

Solar System Review

We live in an ancient solar system. When we look at the sky, we can see the moon, sun, and stars. Earth is one of eight planets in our solar system. Our solar system, located in the Milky Way galaxy, contains many more objects than what can be seen by the naked eye. These objects include gas, dust, a number of dwarf planets, more than 170 named moons, and thousands of comets and asteroids.

Planets in our Solar System

There are eight planets in our solar system. Planets revolve, or move around, the sun. The order of the planets according to their distances from the sun is:

There are four terrestrial planets and four gas giants. The terrestrial planets are also known as the inner planets, while the gas giants are also known as the outer planets. Terrestrial planets have solid surfaces, while gas giants do not. Each of the gas giants have rings, though Saturn's are the most visible!

The order of the planets from largest to smallest is:
Jupiter, Saturn, Uranus, Neptune, Earth, Venus, Mars, Mercury

You can remember it using this mnemonic device:
JUN (Jason) Eats Very Many Meatballs

In addition to the planets in our solar system, there are a number of dwarf planets. Dwarf planets orbit the sun, but cross the orbital paths of other planets. Pluto used to be considered the ninth planet, but it is now considered a dwarf planet. Other dwarf planets in our solar system are Eris, Ceres, Haumea, and Makemake.

for Neil's passion about space. His quest for knowledge took him from the roof of his apartment building to a science expedition in northwest Africa to a summer astronomy camp beneath a desert sky and finally back home to become the director of the Hayden Planetarium where it all began. Before long, Neil became America's favorite guide to the cosmos. This story of how one boy's quest for knowledge about space leads him to become a star scientist is perfect for young readers who are fascinated by the universe, aspiring scientists, and the dreamer in all of us. Find out with this book on astronomy, the latest in NSTA's popular Uncovering Student Ideas in Science series. The 45 astronomy probes provide situations that will pique your students' interest while helping you understand how your students think about key ideas related to the universe and how it operates. The book is organized into five sections: the Nature of Planet Earth, the Sun-Earth System, Modeling the Moon, Dynamic Solar System, and Stars, Galaxies, and the Universe. As the authors note, it's not always easy to help students untangle mistaken ideas. Using this powerful set of tools to identify students' preconceptions is an excellent first step to helping your students achieve scientific understanding. **In Quest of the Solar System** Theo Koupelis, 2010-01-26 Available with WebAssign. Author Theo Koupelis has set the mark for a student-friendly, accessible introductory astronomy text with *In Quest of the Universe*. He has now developed a new text to accommodate those courses that focus mainly on planets and the solar system. Ideal for the one-term course, *In Quest of the Solar System* opens with material essential to the introductory course: gravity, light, telescopes, the sun, and then moves on to focus on key material related to our solar system. Incorporating the rich pedagogy and vibrant art program that have made his earlier books a success, Koupelis' *In Quest of the Solar System* is the clear choice for students making their way through their first astronomy course. **Research in Education**, 1973 **The Complete Home Learning Sourcebook** Rebecca Rupp, 1998 Lists all the resources needed to create a balanced curriculum for homeschooling from preschool to high school level. **The Latest and Best of TESS**, 1991 *Teaching a Unit in Astronomy, Grades 1-9* Joseph Russell Smith, 1958 **The Baker & Taylor Guide to the Selection of Books and Media for Your Elementary School Library** Dorothy A.
